

Šūnu granulas

APRAKSTS

Šūnu granulas tiek sagatavotas no agrīnām cilvēka primārajām šūnām. Katra granula satur 5 miljonus šūnu, un to var izmantot dažādiem lietojumiem, tostarp PCR, Western blotēšanai, genoma DNS bibliotēkas veidošanai un gēnu ekspresijas profilēšanai. Šūnu granulas no ScienCell Research Laboratories ir ērtas un rentablas pētniekiem, jo tās novērš nepieciešamību iegūt dārgus audus.
